

SOLUTION GUIDE

Explore Your **SASE** Side

Protect and connect your network
without compromise.

What is SASE? How does it help your organization?

Secure Access Service Edge (SASE) is an architecture that **integrates networking and network security** functions.

It builds on proven technologies, like cloud-based security, SD-WAN, and zero-trust access, and offers **immediate and long-term benefits** like improved protection, enhanced user experience, agility, and increased productivity for IT teams and business users. A mature SASE solution is offered as a turnkey as-a-service subscription or consumed separately as individual components.

Ready to get your SASE journey going? Follow us.

**Cisco Meraki simplifies
your SASE journey**

Gain agility, security, and consistency with SASE

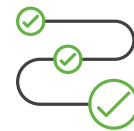

With a consolidated networking and security stack, the Meraki platform provides businesses with the capability to improve user experiences and security anywhere employees work, featuring:

Enhanced security

Streamlined management

Sustained user experience

Powerful productivity

**SASE for HQ, at home,
or on the road**

At headquarters

Reduce manual IT processes by consolidating network and network security functions.

Create consistent policies and permissions for all users, regardless of how they are connected.

Leverage the cloud for agility to meet new opportunities and challenges.

Allow IT professionals to rapidly deploy systems and applications to employees.

Proactively monitor and remediate employee hybrid cloud and SaaS experiences with visibility and analytics across company-owned infrastructure and application servers.

At home

Employees access corporate assets in the same way, regardless of the device they use or their physical location.

Streamlined security processes ensure data, equipment, networks, and other materials are safeguarded without forcing users into burdensome procedures.

User productivity increases because they can safely leverage an organization's applications, data, tools, and other resources.

Home-based users enjoy the same experience as corporate employees with proactive monitoring and remediation.

Collaboration steps up through group access to shared resources.

On the road

Whether at the busiest coffee shop or most client sites, traveling employees connect with performance similar to their corporate counterparts.

Enrich user experience and reduce time to isolate problems with deep visibility and assurance across the infrastructure.

Allow users to securely access an organization's resources, regardless of their whereabouts.

Whether they're in Manhattan or Madras, Manchester or Maykop, employees can more easily collaborate.

Get SASE with Meraki

Solution

A securely optimized office

- Pursue new opportunities with a standardized networking and security foundation
- Securely maximize SaaS productivity with agile security options for direct internet access
- Optimize the experience for multi-cloud workloads with secure SD-WAN connectivity over wired or cellular uplinks
- Quickly identify issues at a glance with intelligent analytics from a client, across the WAN, and to the application server

Secure SD-WAN

Wireless WAN

Cisco Umbrella

Cloud security

Secure and productive anywhere

- Deploy SASE with ease: Subscribe to a single SASE subscription that delivers multiple outcomes
- Simplify IT management: Enjoy an integrated and automated turnkey secure connectivity solution
- Optimize network performance: Get the fastest, most reliable secure connectivity, enabled by Cisco's next-gen visibility and insights
- Enjoy best-in-class security: Connect to Cisco Umbrella, the fastest and easiest way to protect your users and your corporate network
- Improve branch performance: Extend Meraki SD-WAN to the cloud and continuously optimize application performance
- Integrate zero-trust access: Deploy clientless ZTNA to validate users for private application access
